True Colors is an educational and training space for individuals with autism spectrum disorder (ASD). Inspired by the London Underground and the colorful lines on the streets of New York City, True Colors aims to create a space where individuals with ASD can learn through sensory processing and daily routines.

The concept of True Colors is based on the idea that color can be used to guide individuals through their environment, helping them to develop independence and social skills. By using color as a guiding tool, True Colors aims to create a space where individuals with ASD can learn to navigate their surroundings and develop their cognitive and social skills.

Research has shown that individuals with ASD often have heightened sensory processing, which can make it difficult for them to navigate their environment. By using color as a guiding tool, True Colors aims to create a space where individuals with ASD can learn to develop their sensory processing and social skills.

The True Colors space is designed to be flexible and adaptable, allowing individuals with ASD to learn and develop in a variety of different environments. By using color as a guiding tool, True Colors aims to create a space where individuals with ASD can learn to develop their cognitive and social skills and become more independent.

In conclusion, True Colors is a space designed to help individuals with ASD develop their cognitive and social skills through sensory processing and daily routines. By using color as a guiding tool, True Colors aims to create a space where individuals with ASD can learn to navigate their environment and develop their independence.
